Prof. Olov Hedberg

Uppsala Universitet  
Inst. för systematisk botanik

Dear Olov,

We hope, that our letter finds you at home in good health after the long African journey. We arrived home safely together with all our collectings. The only small trouble was, that Attila's suitcase travelled first to Copenhagen, but next day returned to Budapest Airport. During the air travel we had a very nice impression from the rocky Ethiopia, travelling over the main mountain ridges of the country. It was very impressive, as the Arabian Desert as well.

We would like to thank you for all kindnesses and generous help to travel to Tanzania and to enjoy our stay. We both are very enthusiastic about the project and hope, that it will be continued as successfully, as we started. In our next letter we send you photos made during our excursion. We wrote our official report to our Academy last week and we expect, that after the approval of our joint project-proposal the project will be signed soon by the Tanzanian tree parts.

Arriving back, we had a little wintertime with snow, but actually a real spring weather started and in our Bot. Garden things start to blossom.

Many thanks for the sent "Studies of soil erosion and sedimentation in Tanzania". It is a really excellent collection of works very important to our future studies! I have been in close contact with professors Rapp and Temple, when the Mgeta landslide studies were made and also knew the Mfumbwe area.

We are very busy now with the preparation of our 30th Anniversary and other accumulated problems. Anyway, we already started to select the recent Tanzanian materials and all seem to be in good condition and very interesting.

We both thank you again for all, wishing the best to You and to your Family

Yours very sincerely

  
Attila Borhidi & Tamás Pócs
